Author Index

Abadjiev, V. I.	Mathematical modelling for synthesis of spatial gears	31–46
Addlesse, A. J.	The aerodynamic installation of optical fibres in telecommunication netwroks	193–206
Adler , W.	Numerical analysis of multiple jets discharging into a confined cylindrical crossflow	173–180
Allsopp, D.	A model to predict the life of pneumatic conveyor bends	143–149
Anweiler, S.	Recognition of two-phase flow patterns with the use of dynamic image analysis	227–234
Bannister, R. H.	Monitoring the lubricant condition in a low-speed rolling element bearing using high frequency stress waves	73–88
Beck, S. B. M.	Pipeline system identification through cross-correlation analysis	133–142
Bikai, Z.	Experimental investigation of the flow charactersitics of small orifices and valves in water hydraulics	235–246
Bradley, M. S. A.	A model to predict the life of pneumatic conveyor bends	143–149
Bridle, I.	Particle degradation in pneumatic conveyors: use of data from a pilot-sized test facility to predict degradation in an industrial conveyor	65–71
Burgess, S. C.	Reliability and safety strategies in living organisms: Potential for biomimicking	1–13
Castelain, J. M.	Calculation of instantaneous sections in multi-axis milling	105–115
Chang, R. R.	Finite element analyses and experimental considerations of the deflection and failure behaviour of an asymmetric laminate composite bicycle handlebar	207– 218
Deng, T.	A model to predict the life of pneumatic conveyor bends	143–149
Deprez, P.	Calculation of instantaneous sections in multi-axis milling	105–115
El Din, M M Salah	Effect of viscous dissipation on laminar mixed convection in a horizontal channel	167–172
Froeschke, S.	Investigations on the fracturing of nanoparticle agglomerates - first results	219–226
Gilbertson, M. A.	The distribution of a viscous liquid through a perforated tube	59–64
Halam-Owoo, A. K.	Applications of fault detection and diagnostic techniques for refrigerarion and air conditioning: a review of basic principles	121–132
Hanson, R.	A model to predict the life of pneumatic conveyor bends	143–149
Hodkiewicz, M. R.	The effect of change In flow rate on the vibration of double-suction centrifugal pumps	47–58
Hutchins, I. M.	A model to predict the life of pneumatic conveyor bends	143–149
Jamaludin, N.	Monitoring the lubricant condition in a low-speed rolling element bearing using high frequency stress waves	73–88
Kasper, G.	Investigations on the fracturing of nanoparticle agglomerates - first results	219–226
Krotkiewicz, M.	Recognition of two-phase flow patterns with the use of dynamic image analysis	227–234
Lefevre, C.	Calculation of instantaneous sections in multi-axis milling	105–115
Masiukiewicz, M.	Recognition of two-phase flow patterns with the use of dynamic image analysis	227–234
Mba, D.	Monitoring the lubricant condition in a low-speed rolling element bearing using high frequency stress waves	73–88
McNeil, D. A.	The aerodynamic installation of optical fibres in telecommunication netwroks	193–206
Morton, W.	Optimization of a heat exchanger network superstructure using nonlinear programming	89–104
Norton, M. P.	The effect of change In flow rate on the vibration of double-suction centrifugal pumps	47–58
Patel, M. K.	A model to predict the life of pneumatic conveyor bends	143–149
Ruxton, T.	Synthesis using fuzzy set theory and a Dempster-Shafter-based approach to compromise decision-making with multiple-attributes applied to risk control options selection	15–29
Seipenbusch, M.	Investigations on the fracturing of nanoparticle agglomerates - first results	219–226
Shen, W. Q.	A theoretical analysis on the failure of unpressurized and pressurized pipelines	151–165
Shu, D. W.	A theoretical analysis on the failure of unpressurized and pressurized pipelines	151–165
Sii, H. S.	Synthesis using fuzzy set theory and a Dempster-Shafter-based approach to compromise decision-making with multiple-attributes applied to risk control options selection	15–29
Sims, N. D.	Pipeline system identification through cross-correlation analysis	133–142
Smith, D.	A model to predict the life of pneumatic conveyor bends	143–149
Specht, E.	Numerical analysis of multiple jets discharging into a confined cylindrical crossflow	173–180
Stanway, R. .	Pipeline system identification through cross-correlation analysis	133–142
Suen, K. O.	Applications of fault detection and diagnostic techniques for refrigerarion and air conditioning: a review of basic principles	121–132
Szmolke, N.	Recognition of two-phase flow patterns with the use of dynamic image analysis	227–234
Tao, Y.	Numerical analysis of multiple jets discharging into a confined cylindrical crossflow	173–180
Taylor, J.	The aerodynamic installation of optical fibres in telecommunication netwroks	193–206
Tiehua, Z.	Experimental investigation of the flow charactersitics of small orifices and valves in water hydraulics	235–246
Ulbrich, U.	Recognition of two-phase flow patterns with the use of dynamic image analysis	227–234
